

# Putting Raisers on your Aero 750

From the fertile mind of L4H

You can pretty much use any Honda risers as long as the stem length is at least 2 3/16" long. Many have used the Magna risers, but you can use risers from a VLX, an ACE, an Aero 1100 and others. It all depends on the rise and pullback you want to get.

Here's a list:

VLX: Rise = 2 5/8" Pullback = 0" Stem length = 2 3/16"

750 ACE: Rise = 2 5/8" Pullback = 0" Stem length = 2 3/16"

750 Magna: Rise = 3 1/4" Pullback = 3/4" Stem length = 2 3/16"

1100 AERO: Rise = 3 1/4" Pullback = 3/4" Stem length = 2 3/16"

750 Spirit: Rise = 5 1/8" Pullback = 1 1/2" Stem length = 2 3/16"

You can also bore out the triple tree between 12mm and 1/2 inch and use Harley risers.

You can't use risers from a Valkyrie or a VTX1800 because the stem length on those are only 1 1/8" long.

Any additional information will be added as it becomes available.
