

Front Wheel Spikes 2004 Honda Aero 750

Originally I had chrome bullets installed on each fork leg.

But the chrome hub cover wouldn't work with the bullets, so I bought the spikes from Working Class Choppers. (www.workingclasschoopers.com).

With the wheel spikes is a threaded rod which is too long, so I shortend it with a hacksaw.

I left 1 inch of rod on each fork leg. I then wrapped electrical tape on each end. The rod fits loose inside the front axle but won't move when tightened down. I add the tape as an extra measure but it's not necessary.

When I tightend the spikes the tape went inside the axle. I used blue loctite on each spike.

The finished product:

Now when a cage gets too close I can spike em !!!
